

AFiS jr Plus

Features:

Accommodates all MT connector styles including: MT/P (4, 8, 12, 24, 48, & 72 fibers)

Automatically test each fiber in a 72 fiber MT connector without human intervention.

AFiS jr Plus can test two 72 fiber MT connectors at a time.

AFiS jr plus can accommodate all connector types including: FC, SC, ST, LC, MU, & APC

The AFiS jr Plus system tests connectors for scratches, pits, epoxy rings, etc. with size and quantitative information. Utilizing powerful inspection software, this inspection system can quickly and accurately detect defects smaller than a single micron on fiber ends.

The AFiS jr Plus gives the user the ability to create detailed inspection reports. These reports automatically store images from each connector that was tested. Use these reports for Statistical Process Control (SPC), streamline production, tracking purposes, and to send quality control reports with your customer's order.

The AFiS jr Plus system comes with a Dell computer running AFiS Software.
